

pushTAN: Setting up in SFirm

If you're already using SFirm with a different security procedure (e.g. chipTAN), you'll need to set up the pushTAN process again.

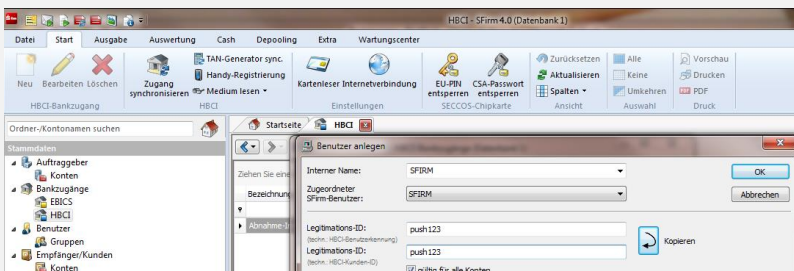

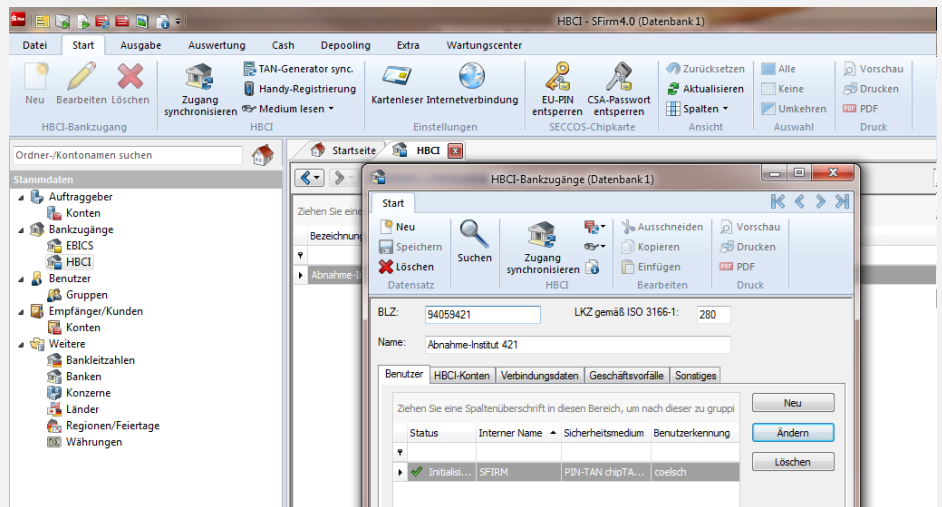

Open SFirm and navigate to the list of HBCI bank accesses that have been set up. Select your Sparkasse account and open the entry.

You can select from the users that are set up for this institution.

Select "Neu" (new) to set up a new user for the pushTAN process.

Enter your pushTAN username or authorisation ID from your registration letter. Select PIN/TAN as the medium.

After the request is made, the bank parameter data will be updated. You must enter a new online banking PIN as part of this process.

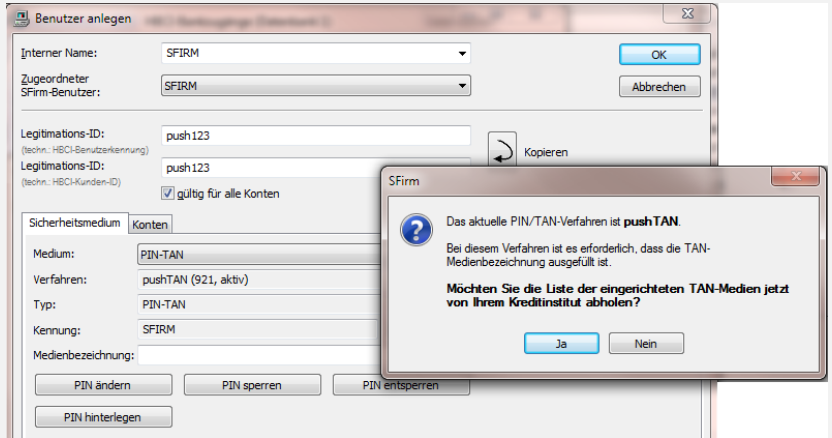

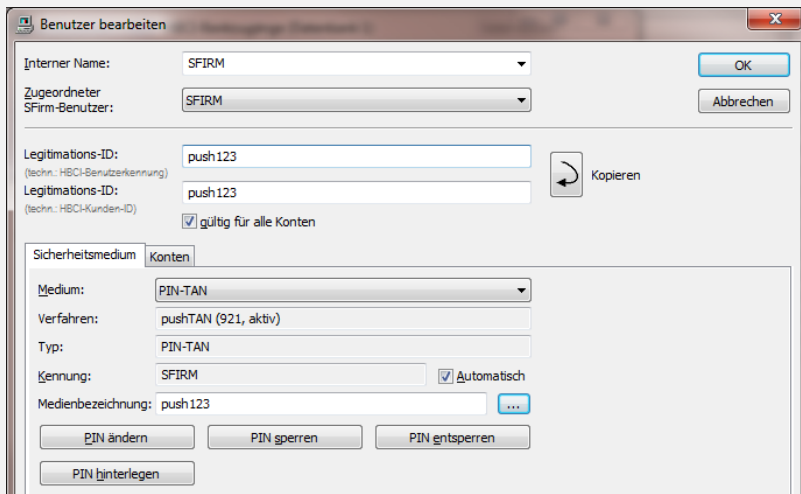

pushTAN: Setting up in SFirm

When selecting the desired medium using the media label, you'll be prompted to open the list of existing TAN media.

After selecting the desired media label, open the "Konten" (accounts) tab.

The "Konten" (accounts) tab lists the accounts associated with the user.

Click OK to save the new HBCI user.
