

pushTAN: Setting up in StarMoney

If you're already using StarMoney or StarMoney Business with a different security procedure (e.g. chipTAN), you'll need to set up the pushTAN process again.

Open StarMoney and click on "Kontenliste" (account list) and then the "Neues Konto" (new account) button. Follow the wizard until you have selected the security medium.

You can then choose from the available security media. Select "PIN/TAN" and enter your pushTAN username or authorisation ID from your registration letter. Click "Weiter" (next) to confirm.

Enter the PIN you chose when setting up online banking access with pushTAN for the first time.

The pushTAN procedure is then stored as the new and preferred security medium for all existing Sparkasse accounts.
